

Functional Requirement Specifications (FRS) for Donation Management System (DMS) Implementation

Project Name: DMS Setup & Configuration (Madrasah Irsyad)

Date of Discussion: 19/05/2026

Prepared By: Elly Sullyanny (Fundraising Executive)

Vendor Partner: Gazzabyte

Madrasah Irsyad Project Team:

- Ustaz Saddam (Operations Manager)
- Ms. Azlia (Senior Finance Executive, Department)

1. Introduction & Project Objective

The objective of this document is to outline the core functional requirements for Madrasah Irsyad's new Donation Management System (DMS).

Our primary goal is to transition from manual, fragmented processes to an integrated, efficient, and future-proof digital system. This implementation focuses on three key pillars:

1. **Operational Efficiency:** Streamlining physical collection workflows (Tabung Fajar, Masjid, and Kedai) and automating donor acknowledgments via email and WhatsApp.
2. **Financial Integrity:** Establishing strict reconciliation guardrails for bank statement uploads (OCBC PayNow) and automated bi-monthly GIRO processing to ensure 100% financial accuracy.
3. **Data-Driven Insights:** Providing robust, dynamic reporting tools to give management clear visibility over all fundraising projects, campaigns, and donation streams.

The requirements detailed below represent the essential workflows required by our Fundraising, Finance, and Operations teams for a successful system deployment.

2. Tabung keluarga

- Upload Excel files containing student data for Levels P1–P6 (1st Batch and 2nd Batch)
- Every student is assigned a unique serial number linked to a scannable barcode on their Tabung
- Scanning the serial number must instantly pull up the student's profile & individual Digital Count sheet

- Automatically timestamps the exact moment a *tabung* is returned.
- "Unreturned" Dashboard: A one-click filter to display students name and classes with outstanding tabung.
- Late or unreturned tabung are highlighted in **Red** for immediate follow-up.
- A "Class Completion" tracker to identify which classes have achieved a 100% return rate.
- A "Top 5 Donors" button to generate a ranking of the highest student contributions
- Automated Reporting: Generate comprehensive summaries including:
 - Total amount collected (per class/level).
 - Statistical breakdown of returned vs. Unreturned tabungs
 - Stock Tins Check

3. Tabung Fajar/Tabung Kedai/Tabung Masjid (Ramadhan)

- Donor Returns & Data Entry: Ability to search and pull up a donor's profile/Masjid and count sheet upon tin return.
- **Manual Donor Creation:** Provide a manual function to quickly create and register a new donor profile directly from this module (for walk-ins or new tin (Hamba Allah)collections).
- Automated Acknowledgement: Trigger an automated "Thank You" letter via email or WhatsApp immediately after the count is recorded.
- The letter must include a digital image of Mudirah's signature.
- Weekly Reporting & Reconciliation: A downloadable weekly report tracking: total tins returned, date/time of return, donor name, amount (Notes and Coins), and the staff member who counted it.
- The report layout must include two signature sign-off lines for audit/audit purpose.

4. OCBC Bank Statement Upload / STRIPE & Campaign Mapping

- Bank Statement Integration: Ability to upload downloaded monthly/weekly OCBC bank statements directly into the DMS.
- Automatically read transaction references (e.g., PayNow reference codes) and map them to specific donation sub-funds/products.
- Current Campaign Keywords to Map: *Infaq, Tabung Jumaat, SWAF (Interest), Waqaf, Ramadhan.*

- *PayNow Receipts & Acknowledgements:* PayNow donations where the donor requests a receipt, the system must automatically trigger an email containing a "Thank You" letter with the official donation receipt attached.

Future-Proofing: The system must allow admins to easily add **new custom keywords/products** in the future as Irsyad expands its fundraising campaigns.

5. **Monthly GIRO Processing**

- Bi-Monthly Bulk Upload: Uploading GIRO response files from the bank twice a month into the DMS.
- Automatically parse the GIRO file to categorize and label donations as either Successful or Unsuccessful.
- Unsuccessful GIRO transactions **must not** be added to the total collected donation amount in any financial summary or dashboard.
- Unsuccessful attempts must be logged as "Unsuccessful" directly against the individual donor's profile, including the specific bank reason code (e.g., *Insufficient Funds, Account Closed*).

6. **Summary & Reporting Dashboard**

- Dynamic Date Range Filtering: The system must feature a dashboard with a date-picker tool allowing admins to key in specific date ranges (e.g., From: 01 Jan 2025 To: 31 Jan 2025).

Categorised Summary Table: Once dates are entered, the system must instantly generate a consolidated summary table. This table must accurately categorise and total the amounts for all income streams, including:

- General donations, Infaq, Waqaf, (all types of diff spellings)
- Tabung Keluarga
- Tabung Fajar
- Tabung Kedai
- Tabung Masjid
- Tabung Masjid (Ramadhan)
- Qurban
- Swaf
- Seasonal Campaigns (Wisata, Coupons, etc....)

6. Front-Desk POS & Miscellaneous Fees

- NETS/PayNow/Cash/Cheque workflows
- Receipting-generate PDF for email or thermal for print to donor
- The "Misc" Category: A flexible module for teachers (carpark) and students (adhoc fees) is vital, so we don't have to create new "products" every time.
- End of the day download/report of all transactions for bank reconciliation.

7. Coupons/Voucher for current project (Nasi Mandi)

- To be discussed during the meeting

8. Qurban

- TBA as the project is ongoing and we are currently using other vendor systems.
